EDUCATION

College of San Mateo — Computer Science Transfer Track (Intended B.S. in Computer Science) — San Mateo, CA
GPA: 3.6 / 4.0 | Coursework: Data Structures, Discrete Mathematics, Intro to Databases — Expected Transfer: Fall 2027

PROJECTS

Manga Tracker | Reading Shelf & Price Checker | Live · GitHub — Jun 2026 – Present
TypeScript, *React*, *Zustand*, *Tailwind CSS*, *Express*, *PostgreSQL*, *Prisma*, *Docker*

- Built a reading tracker and US price checker for physical manga, combining AniList and Open Library catalog data with store prices fetched in parallel through a pluggable provider interface.
- Stored every price check in PostgreSQL to compute per-format price history (low, high, median) with parameterized SQL, and capped paid API calls with an atomic monthly budget.
- Secured the API with PostgreSQL-backed sessions, bcrypt, ownership checks, per-route rate limits, and zod/express-validator validation; deployed as two Railway services on a private network.

Shriyash Uncompiled | Full-Stack Blog Platform | Live · GitHub — Aug 2026
TypeScript, *React*, *Redux*, *Express*, *Passport.js*, *PostgreSQL*, *Prisma*, *Redis*, *BullMQ*, *Docker*

- Built a newsletter CMS that sends email to 14 active subscribers in the background: Nodemailer and Resend handle delivery, while Redis and BullMQ job queues with 7 concurrent workers keep sends reliable and non-blocking.
- Architected a decoupled platform of three services (admin CMS, RESTful API, public client) with a React frontend and Express backend.
- Implemented authentication with Passport.js, storing JWTs in cookies with matched token and cookie expiry to avoid stale sessions.
- Developed a WYSIWYG post editor for the admin CMS, with a markdown-to-HTML parser for rendering posts on the client.
- Wrote two Jest/SuperTest integration test suites (posts and newsletter) and containerized the services with Docker for reproducible deployment.

Where's Waldo | Photo-Hunt Game | Live · GitHub — Sep 2026
TypeScript, *React*, *Zustand*, *Express*, *PostgreSQL*, *Redis*, *Docker*

- Verified every click server-side against character coordinates stored in PostgreSQL, so answers never reach the client or appear in network requests.
- Isolated each player's progress in sessions using express-session with a Redis-backed store (connect-redis).
- Validated all request input with express-validator and wrote Jest/SuperTest integration tests for Redis-backed sessions and click verification, using persistent agents to simulate full multi-request play sessions.

Hwoosting | Cloud File Hosting Platform | Live · GitHub — Jul 2026
TypeScript, *Express*, *EJS*, *PostgreSQL*, *Prisma*, *Supabase*

- Built a server-side rendered file hosting app where users upload, group, and manage files in nested folders, backed by a Supabase S3 bucket.
- Designed a normalized relational schema (Users, Folders, Files) with Prisma to enforce referential integrity across nested directory trees.
- Stored file binaries in S3 storage and only lightweight metadata (MIME type, size, path) in PostgreSQL; handled multipart uploads with Multer.

tailwindcss-highlights-v4 | Open-Source npm Package | npm · GitHub — Oct 2026
JavaScript, *Tailwind CSS v4*

- Forked jln13x's tailwindcss-highlights plugin, added Tailwind CSS v4 support, and published it to npm as tailwindcss-highlights-v4.

PROFESSIONAL EXPERIENCE

IT Administrator, Ultimate Home Care — Palo Alto, CA — Jul 2026 – Present

- Migrated 50+ active client records and billing histories from QuickBooks to AxisCare, preserving data integrity and HIPAA compliance.
- Configured automated employee scheduling in AxisCare, reducing scheduling conflicts and manual administrative work.
- Maintain the company's Wix website, adding new Hiring and Contact sections, and manage client invoicing.

Computer Science Tutor, Self-Employed — Redwood City, CA — Jan 2024 – Present

- Design and deliver personalized A-Level Computer Science exam-prep lesson plans for students in Pakistan, Nepal, and the UK.
- Tutor 4 students at a time, 8–10 hours per week, on object-oriented programming and data structures, adapting instruction to each student's exam board and pace.

ADDITIONAL EXPERIENCE

Server, Benihana — San Mateo, CA — Dec 2024 – Jul 2026

- Founding team member of the San Mateo location; trained new servers in a high-volume dining room.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, Java, HTML/CSS
Frameworks/Libraries: React, Node.js, Express, Redux, Zustand, Tailwind, Passport.js
Backend & Data: PostgreSQL, Prisma, Redis, BullMQ, Supabase, RESTful APIs, Nodemailer, Resend
Testing, Deployment & Tools: Jest, Vitest, SuperTest, Docker, Linux, Railway, Vercel, Git, GitHub, Vite, Webpack, Postman
