EDUCATION

College of San Mateo — Computer Science Transfer Track (Intended B.S. in Computer Science) San Mateo, CA
GPA: 3.6 / 4.0 | Coursework: Data Structures, Discrete Math, Databases Transfer: Fall 2027 · Expected B.S.: Fall 2028

PROJECTS

Manga Tracker | Reading Shelf & Price Checker | Live · GitHub Jun 2026 – Present

TypeScript, *React*, *Zustand*, *Tailwind CSS*, *Express*, *PostgreSQL*, *Prisma*, *Jest*, *Docker*

- Built and launched a manga reading shelf with live US prices, used by ~300 readers a week (18 registered accounts); each series leads with the next volume a reader needs and its cheapest store.
- Combined AniList and Open Library catalog data with live store prices from SerpApi, checking every store at once and filtering out fake or mislabeled listings before saving them.
- Saved every price check in PostgreSQL to show each volume's lowest, highest, and median price over time, and capped paid API searches with a monthly budget that busy traffic and search-engine bots can't overspend.
- Added MyAnimeList import, barcode scanning, and new-release tracking so readers can fill and follow their shelf.
- Secured accounts with bcrypt-hashed passwords, database-backed sessions, per-user access checks, rate limits, and input validation; tested with Jest/SuperTest in GitHub Actions CI and deployed with Docker on Railway.

Shriyash Uncompiled | Full-Stack Blog Platform | Live · GitHub Aug 2026

TypeScript, *React*, *Redux*, *Express*, *Passport.js*, *PostgreSQL*, *Prisma*, *Redis*, *BullMQ*, *Docker*

- Built a blog as three apps (admin dashboard, REST API, public site), with a rich-text editor that saves posts as Markdown.
- Sent newsletter emails through a background job queue (Redis, BullMQ) with 7 workers, delivered via Nodemailer and Resend, so publishing never waits on email.
- Added Passport.js login with JWT cookies set to expire with the token, so stale sign-ins never linger.
- Wrote Jest/SuperTest tests for the posts and newsletter APIs and packaged the services with Docker.

Where's Waldo | Photo-Hunt Game | Live · GitHub Sep 2026

TypeScript, *React*, *Zustand*, *Express*, *PostgreSQL*, *Redis*, *Docker*

- Checked every click on the server against answer locations stored in PostgreSQL, so players can't find answers in the browser.
- Kept each player's progress in a separate Redis session so games never mix, and added per-level leaderboards.
- Validated every request with express-validator and wrote Jest/SuperTest tests that play through full games.

tailwindcss-highlights-v4 | Open-Source npm Package | npm · GitHub Oct 2026

JavaScript, *Tailwind CSS v4*

- Forked jln13x's tailwindcss-highlights plugin, added Tailwind CSS v4 support, and published it to npm.

Hwoosting | Cloud File Hosting Platform | Live · GitHub Jul 2026

TypeScript, *Express*, *EJS*, *PostgreSQL*, *Prisma*, *Supabase*

- Built a server-rendered file hosting app where users upload and manage files in nested folders on Supabase Storage.
- Kept files in Supabase Storage and only their name, size, type, and path in PostgreSQL; handled uploads with Multer.

EXPERIENCE

Event Organizer & Security Officer, Google Developer Group on Campus — College of San Mateo Sep 2026 – Present

- Run technical workshops and help build a LiDAR-based cane that alerts blind users to obstacles (in progress).
- Recruit and onboard new members, apply for club funding, and organize member teams for Devpost hackathons.

IT Administrator, Ultimate Home Care — Palo Alto, CA Jul 2026 – Present

- Migrated 50+ client records and billing histories from QuickBooks to AxisCare.
- Configured automated employee scheduling in AxisCare, reducing scheduling conflicts and manual administrative work.
- Maintain the company's Wix website, adding new Hiring and Contact sections, and manage client invoicing.

Computer Science Tutor, Self-Employed — Remote Jan 2024 – Present

- Design personalized A-Level Computer Science exam-prep lessons for students in Pakistan, Nepal, and the UK.
- Tutor 4 students at a time, 8–10 hours a week, in object-oriented programming and data structures.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, Java, HTML/CSS
Frameworks/Libraries: React, Node.js, Express, Redux, Zustand, Tailwind CSS, Passport.js
Backend & Data: PostgreSQL, Prisma, Redis, BullMQ, Supabase, RESTful APIs, Nodemailer, Resend
Testing, Deployment & Tools: Jest, Vitest, SuperTest, Docker, Linux, Railway, Vercel, Git, GitHub Actions, Vite, Webpack, Postman
